System Requirements

To use xFlow 5.2.1, please observe the following system requirements.

NOTE

If xFlow 5.2.1 is used in combination with SAP Fiori for SAP ERP or SAP Fiori for S/4HANA Finance, additional system requirements apply, see publication *xFlow Apps for SAP Fiori Installation Guide*.

SAP System

Component	Supported Version
SAP ERP	6.0
SAP Basis	7.00 with Support Package 23 or higher
SAP_APPL	6.00 Patch 18
SAP S/4HANA	Is supported up to and including version 1709

SAP GUI

Component	Supported Version
SAP GUI	7.30 with patch level 10 or higher

xFlow Release

Component	Supported Version
xFlow Interface	5.2.1 or higher
xFlow Invoice	4.2.2 and higher (for upgrade or migration)

Web Client

Depending on the web client and version, display may vary. HTML5, AJAX, jQuery, CSS3, and JavaScript must always be supported by the web browser and activated as well.

When using xFlow Web, Unicode support in the SAP system must be activated.

The recommended screen resolution for the xFlow Web is Full HD (1920 x 1080) or higher.

Component	Supported Version
Microsoft Internet Explorer	11
Mozilla Firefox	46 or higher
Google Chrome	46 or higher

**NOTE**

Because of the extreme frequency of development cycles of browser versions put out by browser developers, explicit compatibility of xFlow Web client versions with specific browser versions cannot necessarily be provided. When performing quality assurance, the browser versions currently available are tested. New versions or patches may place limitations on functionality and display in xFlow Web and xFlow Mobile.

Please also check the [SAP Open UI5 requirements](#).

Web Server

Component	Supported Version
SAP NetWeaver Web Application Server	7.00 (ABAP Stack recommended) or higher
Apache Tomcat	2.4
Microsoft IIS	7 or higher

Support of more web servers may be possible, to be checked on a case-to-case basis. The SAP Web Application Server can be run on the same system as the SAP ERP system.

**NOTE**

If the necessary xFlow web service is not running on the web server from which the Web is accessed (the server being one such as Apache Tomcat, Microsoft IIS, etc.) but rather in a different domain, then so-called cross-domain access via JavaScript is necessary. Permission must have been granted for cross-domain access and reflected in web client security settings.

Additional xFlow Applications

If you use the following xFlow applications make sure you meet the following system requirements:

xFlow Mobile

Component	Supported Version
xFlow	5.2.1 or higher
Apple iOS (smartphone and tablet)	Version 11 or higher
Windows Mobile (smartphone und tablet)	Version 10 or higher

**NOTE**

Because of the extreme frequency of development cycles of browser versions put out by browser developers, explicit compatibility of xFlow Web client versions with specific browser versions cannot necessarily be provided. When performing quality assurance, the browser versions currently available are tested. New versions or patches may place limitations on functionality and display in xFlow Web and xFlow Mobile.

Please also check the [SAP Open UI5 requirements](#).

Additional requirements:

- Internet connection (3G or faster recommended)
- Secure access to the web server e.g. via VPN or reverse proxy

xFlow Process Analyzer

Component	Supported Version
xFlow Invoice	5.2.1 or higher

xFlow Recurring Documents

Component	Supported Version
xFlow Invoice	5.2.1 or higher
